

# Fascia Mounting Kit Installation and Mounting Guide

Use with the All Purpose Ventilator, Add-A-Panel Kit, or with remote mounted panels on the Solar Powered Attic Fan.

The Fascia Mounting Kit allows you to install the solar panel of the All Purpose Ventilator and Add-A-Panel Kit directly to a fascia board. This gives you another option for mounting the panel instead of on the roof tiles or an exterior wall. Here are the following steps to install.

## Attach the fascia brackets to the fully assembled wall brackets included with your All Purpose Ventilator

fig. 5

### Step 1

On a flat surface, orient the two brackets as shown. (**fig. 1**) You can also install on wall brackets that are already attached to the panel - just make sure they are facing the same direction.

### Step 2

Locate the lower hole on the wall bracket (**fig. 2**) and fit the bolt through the 2 brackets and attach the nut. (**fig. 3**)

### Step 3

Repeat step 2 for the upper hole with another bolt and nut (**fig. 4 and 5**) Once both nuts are secure, tighten completely with an adjustable wrench.

### Step 4

Repeat all the steps again for the second set of braces. Then attach to the solar panel as described in your 9910APV installation instructions.

## Attach the complete assembly to your fascia board

### Step 5

Find a desired location for the completed assembly and attach with four 1.5" gvanized screws (not included) or fasteners appropriate for your fascia material. (**fig. 6 and 7**) Once secure, adjust the panel as desired.
